DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11, drawn to a system for positioning a stent in a patient, classified in class 623, subclass 1.11.
 - II. Claims 12-20, drawn to a method for positioning a stent in a patient, classified in class 623, subclass 902.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different product, or (2) the product as claimed can be used to practice another and materially different process of using that product. (MPEP § 806.05(h)). In this case the product as claimed can be used to practice another and materially different process, such as a system does not include a transceiver mounted on the catheter. The method of invention II does not recite the steps necessitating the need to evaluate a return signal to determine the relationship between the stent and the bifurcation, and therefore is not limited to be performed by the system of invention I. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different sub-class, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
